

SB11 HINGED INTERGRAL

INTEGRAL LOCK FOLDING PARKING POST

Our SB11HI is zinc coated for extra protection against the weather and rust, fitted with an integral lock near the top of the post, and comes with two keys as standard. Ideal for protecting your parking space or stopping people turning around in your driveway.

As standard this is surface mounted, we recommend it is bolted to concrete for extra security. A concrete in version is also available for those after that more secure solution.

If you want a smart looking post but don't want to spend time fiddling with a lock at the base of the post, this one is easily recommended.

If buying multiple posts, we offer locks keyed alike with extra keys also if required.

Also available powder coated Hi Viz Yellow.
