

SB11 HINGED PADLOCK

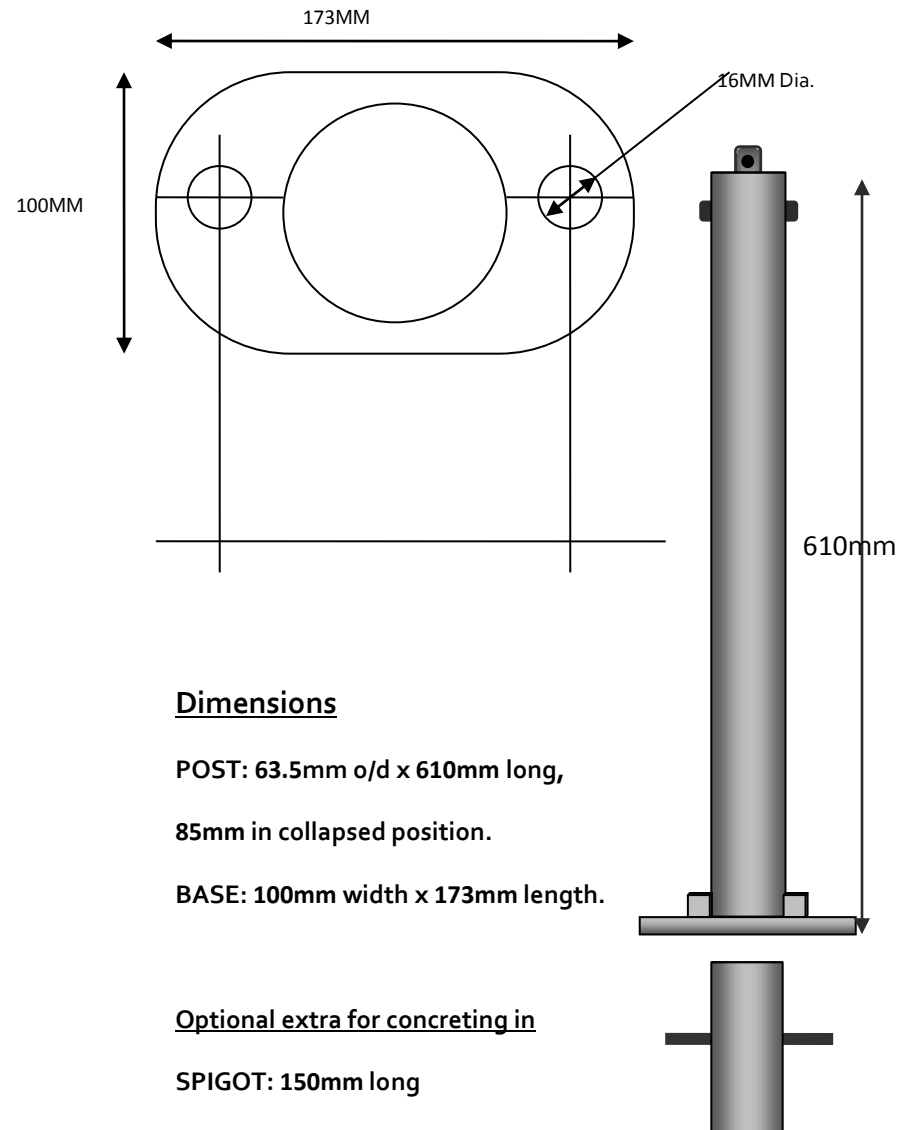

PADLOCKABLE FOLDING PARKING POST

Our SB11HP is zinc coated for extra protection against the weather and rust, for ease of operation this parking post has the padlock facility at the top of the post (padlock not supplied). An ideal solution for protecting your parking space or putting an end annoying vehicles turning around in your driveway.

As standard this is surface mounted, we recommend it is bolted to concrete for extra security. A concrete in version is also available for those after that more secure solution.

If you want a smart looking post but don't want to spend time fiddling with a lock at the base of the post, this one is easily recommended.

Also available powder coated Hi Viz Yellow.
