

CLEANING, MAINTENANCE & REPAIR

To maximise life expectancy, our barriers should be regularly visually inspected for any signs of damage, vandalism, breakdown of surface finish and build-up of salt, dirt or atmospheric residue.

In the event of serious damage to any main component then Stopem should be contacted immediately for detailed technical advice.

Recommended plan:

Frequency	Type	Details
Daily	Pre-use safety checks	Ensure locking mechanism is working correctly and the barrier can be operated in a safe manner. Visual inspection for any signs of damage
3 Monthly	Cleaning	General clean down of barrier using a mild detergent in warm water.
	Visual Inspection	Visual inspection to identify: <ul style="list-style-type: none">• Damage/Wear• Breakdown of surface finish• Reduction of performance Lubrication of moving parts
